

... designed to **be faster**

Aerospace

Precision machines and technologies
for the aerospace industry

Where production goals are achieved quickly and cost-effectively

WEISSER offers modular, high-performance and ergonomic manufacturing solutions designed to meet customer requirements.

All WEISSER multifunctional machining centres and precision turning machines were designed with the most modern engineering practices available today.

The machines offer reliability and low maintenance. Its extremely rigid machine bed guarantees maximum precision even with the difficult-to-cut materials of today.

Thanks to the versatile options that are available, the basic machines can be configured to the special requirements of the aerospace industry.

WEISSER is one of the global technological leaders. The basis of this success are new technologies, developed for the need of today and tomorrow, customized machining solutions and supply of first class service worldwide.

The WEISSER brand stands for high technology in turning as well as for system solutions that optimize your processes with integrated automation from one source.

The technology portfolio includes the following operations:

- Multi functional machining
- Green- and hard turning
- Patent-registered rotational turning
- Polygonal turning
- Polygonal joining
- Grinding
- Finishing by abrasive band

Savings potential up to 77% by rotational turning

- Surfaces free of lead
- Substitution of grinding and super finish-processes
- External and internal facing
- Machining with higher feed and higher cutting speeds
- Dry machining
- High long-term accuracy
- First class process stability
- Special contribution to environment protection by the elimination of coolant and grinding debris

Every part leads to more benefit

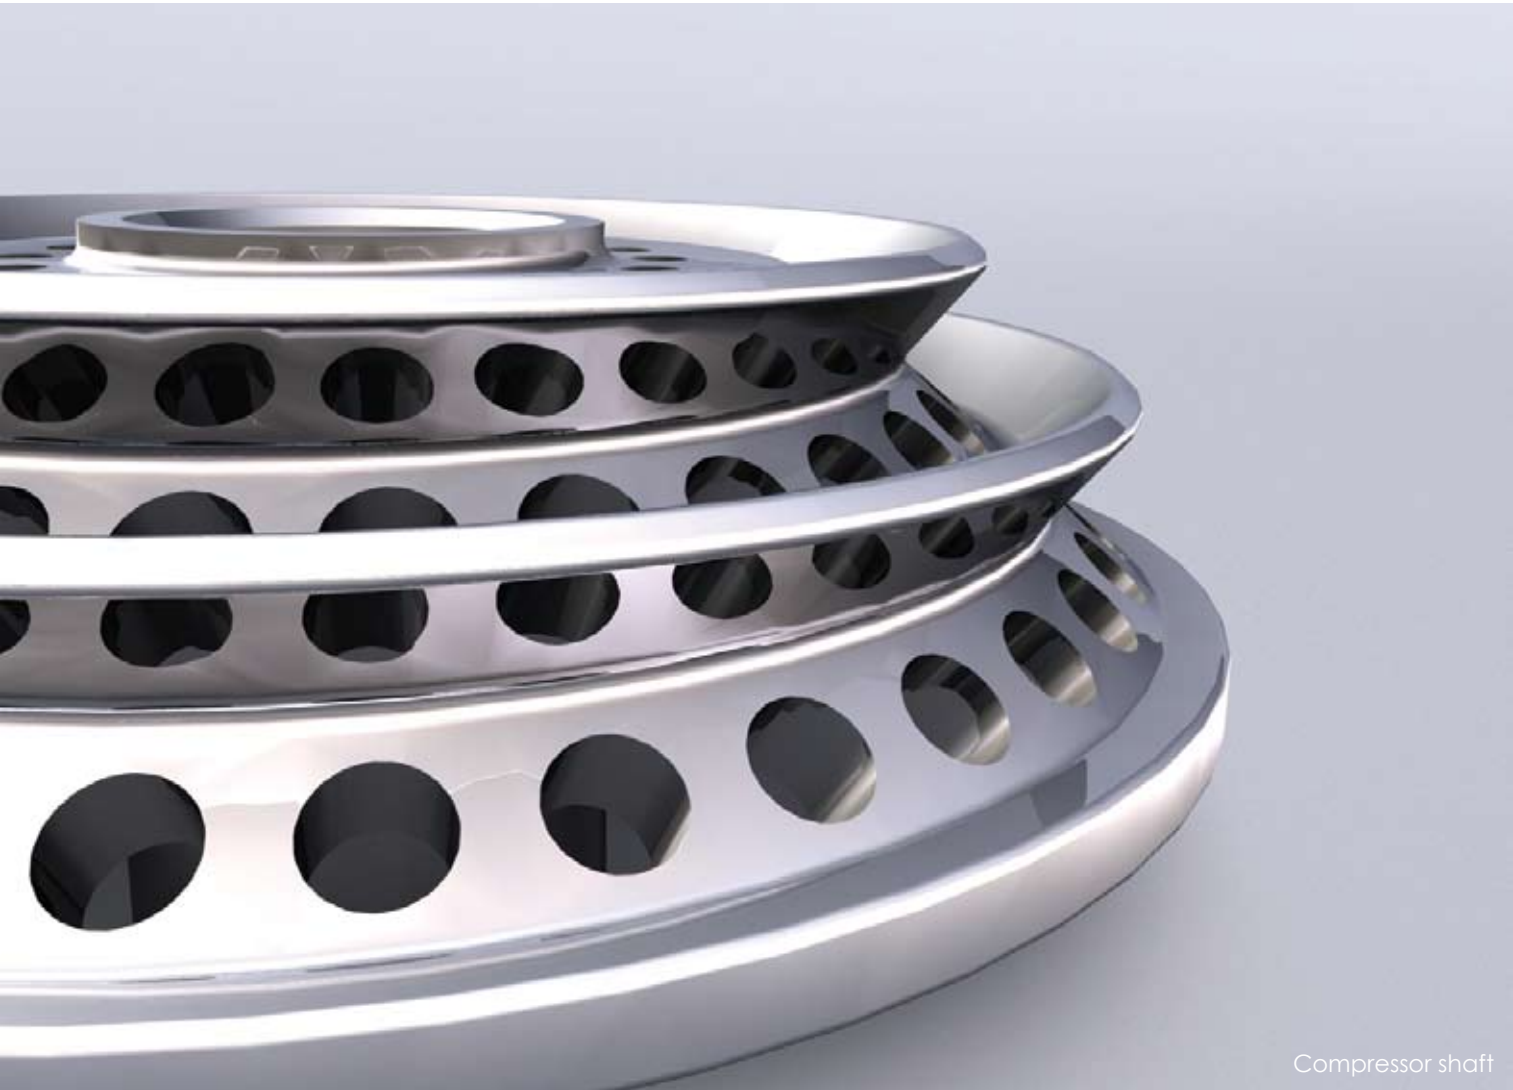

The WEISSER VERTOR and UNIVERTOR series are ideally suited for complete machining of aerospace parts
